

# Signals and Systems 信號與系統

## Lecture 1-3

1

## Cascading System

(系統串接方式)

(a)

(b)

2

Discrete-time-shift operator  $S^k$ , operating on the discrete-time signal  $x[n]$  to produce  $x[n - k]$ .

(離散時間延遲系統與離散時間時間平移運算元  $S^k$ )

3

## Two implementations of the moving-average system

(a) cascade form of implementation and  
(b) parallel form of implementation.

4

## Properties of Systems

- Stability 穩定性
- Memory 記憶性
- Causality 因果性
- Invertibility 可逆性
- Time Invariance 非時變性
- Linearity 線性

5

## Stability

- **B**ounded **I**nput causes **B**ounded **O**utput (BIBO).
- 輸入與輸出需滿足：

$$|y(t)| \leq M_y < \infty$$

$$|x(t)| \leq M_x < \infty$$

for  $M_x, M_y$  are finite and positive numbers.

- Unstable Example:
  - “Tacoma Narrows Suspension Bridge”

6

**Dramatic photographs showing the collapse of the Tacoma Narrows suspension bridge on November 7, 1940.**

**(a) Photograph showing the twisting motion of the bridge's center span just before failure.**

**(b) A few minutes after the first piece of concrete fell, this second photograph shows a 600-ft section of the bridge breaking out of the suspension span and turning upside down as it crashed in Puget Sound, Washington. Note the car in the top right-hand corner of the photograph.**

**(Courtesy of the Smithsonian Institution.)**

9

## Example of a Stable System

*Example:* [ Moving-average case ]

$$y[n] = \frac{1}{3}(x[n] + x[n-1] + x[n-2]).$$

$$|y[n]| = \frac{1}{3}(|x[n] + x[n-1] + x[n-2]|)$$

$$\leq \frac{1}{3}(|x[n]| + |x[n-1]| + |x[n-2]|) \leq \frac{1}{3}(M_x + M_x + M_x) = M_x$$

10

## Example of an Unstable System

*Example :*

$$y[n] = r^n x[n], \quad \forall r > 1$$

*even if  $|x[n]| \leq M_x < \infty, \quad \forall \text{all } n$*

$$|y[n]| = |r^n x[n]| = |r^n| \cdot |x[n]|$$

*if  $r > 1$ ,  $r^n$  divergences*

## Memory or Memory-less

Memory :

若系統輸出取決於過去的訊號輸入時

Memory-less :

若系統輸出僅取決於現在的訊號輸入時

## Causality

Causal :

若系統輸出取決於目前或過去的訊號輸入時

$$Ex: \quad y[n] = x[n] + x[n-1]$$

Non-causal :

若系統輸出取決於一個或以上未來的訊號輸入時

$$Ex: \quad y[n] = x[n+1] + x[n]$$

## Example: Causal System ?

Series *RC* circuit driven from an ideal voltage source  $v_1(t)$ , producing output voltage  $v_2(t)$

## System Invertibility

The second operator  $H^{inv}$  is the inverse of the first operator  $H$ . Hence, the input  $x(t)$  is passed through the cascade correction of  $H$  and  $H^{-1}$  completely unchanged.

$$H^{inv} = H^{-1}$$

15

## Time Invariance

These two situations are equivalent, provided that  $H$  is time invariant.

$$y_2(t) = y_1(t - t_0)$$

16

## The Linearity Properties

If these two configurations produce the same output  $y(t)$ , the operator  $H$  is linear.

17

**EX: RC circuit :**  $y(t) = ?$  in response to the unit-impulse input  $x(t) = \delta(t)$ .

回憶 : *step response* :  $y(t) = (1 - e^{-t/RC})u(t)$

(電容充電  $y(t)$  電壓緩緩上升)

18

## Rectangular pulse of unit area approaches a unit impulse as $\Delta \rightarrow 0$

$$x_{\Delta}(t) = \frac{1}{\Delta} u\left(t + \frac{\Delta}{2}\right) - \frac{1}{\Delta} u\left(t - \frac{\Delta}{2}\right)$$

$$= x_1(t) - x_2(t)$$

$$\delta(t) = \lim_{\Delta \rightarrow 0} x_{\Delta}(t)$$

19

## System Output $y(t)$ , applying Linear property:

$$y_1(t) = H\{x_1(t)\}; \quad y_2(t) = H\{x_2(t)\};$$

$$y(t) = y_1(t) \pm y_2(t) = H\{x_1(t) \pm x_2(t)\} \quad (\text{應用線性特性})$$

*solution:*

$$y_1(t) = \frac{1}{\Delta} \left( 1 - e^{-(t+\Delta/2)/(RC)} \right) u\left(t + \frac{\Delta}{2}\right)$$

$$y_2(t) = \frac{1}{\Delta} \left( 1 - e^{-(t-\Delta/2)/(RC)} \right) u\left(t - \frac{\Delta}{2}\right)$$

$\therefore$  (中間步驟請自行參考教科書並加以推導)

$$y(t) = y_1(t) - y_2(t) = \frac{1}{RC} e^{-t/RC} u(t)$$

20

EX:  $RL$  circuit :  $y(t)$  in response to the unit-impulse input  $x(t) = \delta(t)$  ?

類似前題請自行參考並推導

21

Waveform of electrical noise generated by a thermionic diode with a heated cathode.

Note that the time-averaged value of the noise voltage displayed is approximately zero.

22

- (a) Thévenin equivalent circuit of a noisy resistor.  
 (b) Norton equivalent circuit of the same resistor.

(a)

(b)

23

Simple RC circuit with small time constant, used as an approximator to a differentiator.

24

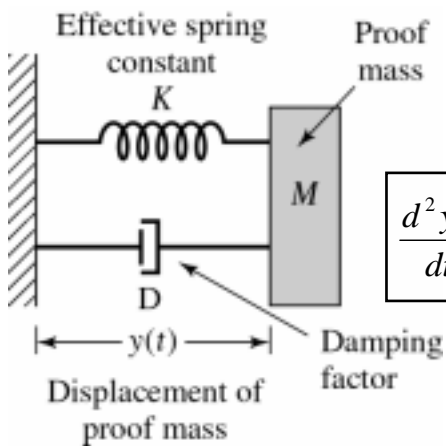

Simple RC circuit with large time constant used as an approximator to an *integrator*.

25

## Mechanical lumped model of an accelerometer

$$\frac{d^2 y(t)}{dt^2} + \frac{D}{M} \frac{dy(t)}{dt} + \frac{K}{M} y(t) = x(t)$$

26

## Radar Range Measurement

雷達與目標間距離： $d$

雷達脈波傳遞至目標並傳回所需時間  $\tau$ ： $\tau = \frac{2d}{C}$

$C$ ：雷達脈波傳遞速度

27

## Radar Range Measurement (cont.)

距離解析度 (Range Resolution)

脈波持續時間  $T_0$  限制可測量最短目標距離：

$$d_{\min} = \frac{cT_0}{2} \text{ meters}$$

距離模糊度 (Range Ambiguity)

脈波間週期  $T$  限制可測量最遠目標距離：

$$d_{\max} = \frac{cT}{2} \text{ meters}$$

28

## Moving Average System

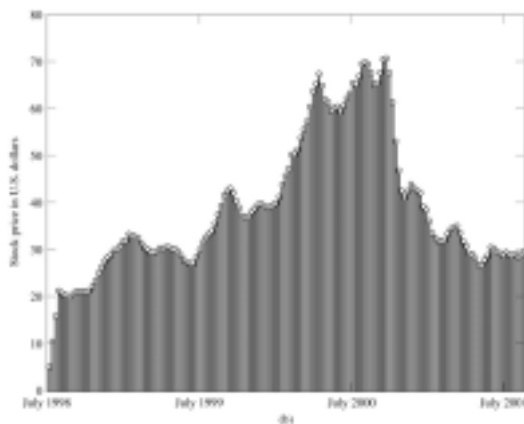

Fluctuations in the closing stock price of Intel over a three-year period.

29

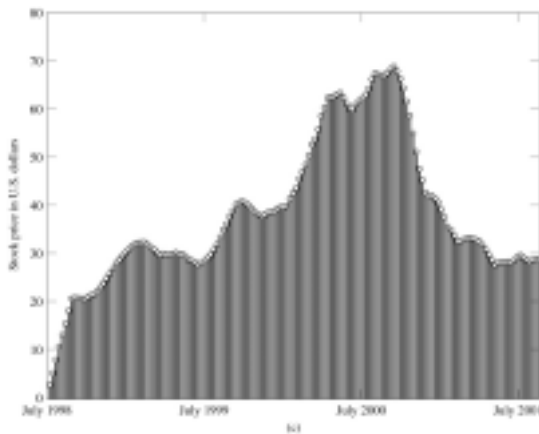

## Output of a 4-point moving-average system

30

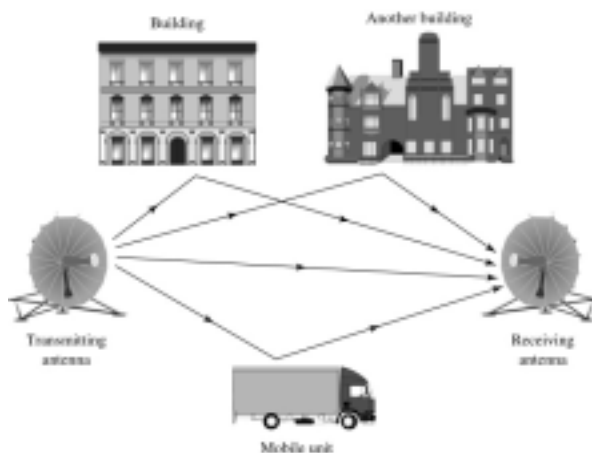

## Output of an 8-point moving-average system

31

## Multiple propagation paths in a wireless communication environment

32

## Tapped-delay-line model of a linear communication channel, assumed to be time-invariant

33

## Block diagram of first-order recursive discrete-time filter

The operator  $S$  shifts the output signal  $y[n]$  by one sampling interval, producing  $y[n-1]$ .  
The feedback coefficient  $p$  determines the stability of the filter.

34

## Exponentially damped sinusoidal sequence

35

## Exploring Concepts with MATLAB

- Periodic Signals
- Exponential Signals
- Sinusoidal Signals
- Exponentially Damped Sinusoidal Signals
- Step, Impulse and Ramp Functions
- User Defined Functions

36

## MATLAB Window 畫面

37

## Periodic Signal

- Generate Square Wave:

$$A = 1;$$
$$w0 = 10 * pi;$$
$$rho = 0.5;$$
$$t = 0 : 0.001 : 1;$$
$$sq = A * square(w0 * t, rho);$$
$$plot(t, sq)$$
$$axis([0 1 -1.1 1.1])$$

38

## Exponential Signal

- Generate Function:  $x = b \exp(-at)$

$$b = 5;$$

$$a = 6;$$

$$t = 0:0.001:1;$$

$$x = b * \exp(-a * t);$$

$$\text{plot}(t, x)$$

39

## Exp Signal Plot

40

## Sinusoidal Signal

- Generate Function:  $x = A \cos(\omega_0 t + \phi)$

$$A = 4;$$

$$\omega_0 = 20 * \pi;$$

$$\phi = \pi / 6;$$

$$t = 0 : 0.001 : 1;$$

$$x = A * \cos(\omega_0 * t + \phi);$$

$$\text{plot}(t, x)$$

41

## Sine Signal Plot

42

## Exponentially Damped Sinusoidal Signal

- Generate Function:  $x = A e^{-at} \sin(\omega_0 t + \phi)$

$A = 60;$

$w0 = 20 * pi;$

$phi = 0;$

$a = 6;$

$t = 0 : 0.001 : 1;$

$x = A * \sin(w0 * t + phi) .* \exp(-a * t);$

$plot(t, x)$

43

## Exp. Damped Sine Signal Plot

44

## Step, Impulse and Ramp Function

- Generate Step Function:

$$u = [\text{zeros}(1,50), \text{ones}(1,50)];$$

- Generate Impulse Function:

$$\text{delta} = [\text{zeros}(1,49), 1, \text{zeros}(1,49)];$$

- Generate Ramp Function:

$$\text{ramp} = 0 : 0.1 : 10;$$

45

## User Defined Function

- Generate “.m” file to define function:

$$\text{function } g = \text{rect}(x)$$
$$g = \text{zeros}(\text{size}(x));$$
$$\text{set} = \text{find}(\text{abs}(x) \leq 0.5);$$
$$g(\text{set}) = \text{ones}(\text{size}(\text{set}));$$

46

P1.46 試求下圖訊號能量總和 ?

$$E = \int_{-\pi/\omega}^{+\pi/\omega} x^2(t) dt$$

$$x(t) = \begin{cases} \frac{1}{2}[1 + \cos(\omega t)], & -\pi/\omega \leq t \leq \pi/\omega \\ 0, & \text{others} \end{cases}$$

47

P1.47 試求下圖訊號能量總和 ?

$$E = \int_{-5}^{+5} x^2(t) dt$$

$$x(t) = \begin{cases} 5-t, & 4 \leq t \leq 5 \\ 1, & -4 \leq t \leq 4 \\ t+5, & -5 \leq t \leq -4 \\ 0, & \text{others} \end{cases}$$

48

P1.52 請繪出下列訊號圖？

- (a)  $x(t)y(t-1)$   
 (b)  $x(t-1)y(-t)$   
 (c)  $x(t+1)y(t-2)$

(a)

(b)

49

P1.53 試以  $g(t)$  表示  $x(t)$  ?

(a)

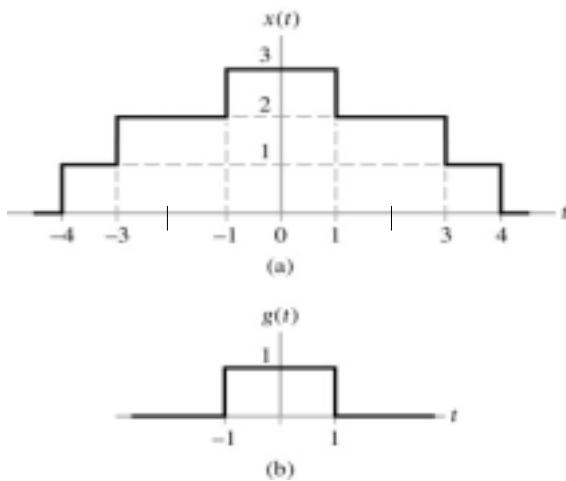

(b)

50

P1.55 試以  $g(t)$  表示  $x(t)$  ?

51

P1.56 請繪出下列訊號圖？

- (1)  $x[2n]$
- (2)  $x[3n-1]$
- (3)  $y[1-n]$
- (4)  $y[2-2n]$
- (5)  $x[n-2] + y[n+2]$

52

P1.62 將下面三角訊號送入一微分器，回答下列問題

- (a) 微分器輸出  $y(t)$  為何？
- (b) 當  $\Delta$  趨近於零時，輸出  $y(t)$  變化為何？以  $\delta(t)$  說明

P1.63 試求出總系統？

**P1.75**

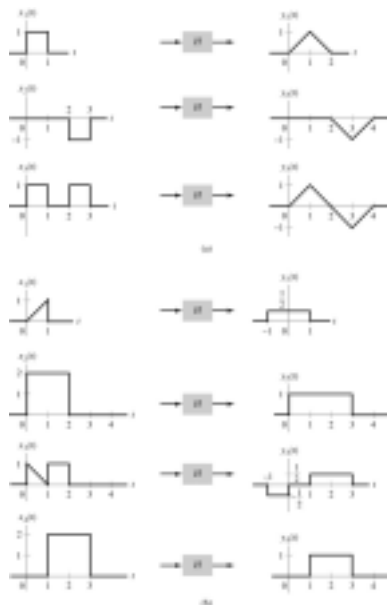

說明右圖各系統特性？

記憶性？

因果性？

線性？

(非)時變性？

**P1.76**

說明右圖各系統特性？

記憶性？

因果性？

線性？

(非)時變性？

P1.77

若 (a) 輸出  $y[n]$  是  $x[n] = \delta[n]$  所產生，  
現以 (b)  $x[n]$  輸入則  $y[n]$  為何？

57

P1.79 試寫出微分方程式來描述下列電路？

58

P1.80

59

P1.81 若下圖  $H$  為線性非時變系統，請舉例說明？

60

P1.82

試求  $A = ?$

$$x_{\Delta}(t) = \frac{1}{\Delta} \left( e^{+t/\tau} u(-t) + e^{-t/\tau} u(t) \right)$$

P1.83 電路 (a) 和 (b) 是否互為反運算 ?

$$y(t) = A_0 \cos(\omega_0 t + \phi) x(t)$$

P1.84 系統輸出:

- (a) 證明此系統為線性
- (b) 證明此系統為時變性

63

P1.89 以輸入  $x[n]$  寫出輸出  $y[n]$  表示式?

64

P1.92 試繪出下圖中方塊圖？
